KISSsoft 2023

Hard- and Software requirements for KISSsoft calculation programs

Hard- and Software requirements for KISSsoft calculation programs

The KISSsoft calculation programs are continuously adapted to the development in hard- and software markets. Therefore, it runs on all common operating systems and processors.

Computer configuration

To run the programs, you require the following computer configuration:

- Operating system: Windows 64-bit, Windows 8.1 and higher
- Windows N and KN require the installation of Microsoft Media Feature Pack
- Windows servers require the installation of Microsoft Media Foundation
- Processor: at least compatible with SSE2
- RAM: at least 4 GByte RAM
- Screen resolution: at least 1280 x 1024 pixels
- OpenGL 3.2
- Printer: Windows printer
- Memory: hard disk approximately 800 – 3000 MB (depending on extent and requirements)

Network licenses/Floating licenses:
- Server requirements when installed on a server: Windows Server 2016 and higher.
- To manage a floating license, an access directory located on a data server is required.
- Each KISSsoft user must have read/write/delete authorization on the access directory.
- The hardware code of the access directory must not be changed and must not be 0 (this can be checked in the KISSsoft license tool).
- For a virtual server, a specific hard disk serial number of the access directory must be explicitly defined. When a virtual server is used, proper operation cannot be guaranteed; tests must be performed in this case.
- Server farms can have multiple hard disk serial numbers, which can be recorded in one license file (10 at maximum).

Licenses with a hardware dongle:
- Requires at least one free USB 2.0 port

Further requirements may be necessary for certain functions. In this case, we recommend that you consult your local partner or KISSsoft AG.
